

Distribution Automation Starter Kit

Amp Up Response and Control with an Affordable Package Tailored to Your Needs

AMI is the foundation of a smart grid. Once that network is in place, adding intelligence and automation to your distribution system is the logical next step.

For a limited time, Landis+Gyr is combining all necessary components in a single package that lets your utility experience the value of Distribution Automation (DA) for a variety of purposes.

PACKAGE INCLUDES :

12 IWR Radios for Asset Integration

1 SCADA Center Software License

12 S610 Line Sensors for Fault Detection

+ Project management, services and training during the 90-day set-up period

POTENTIAL APPLICATIONS

This flexible package allows you to try the features that provide the most value for your utility.

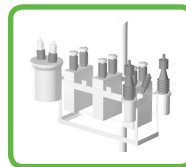

Line Sensing

Landis+Gyr's S610 Line Sensor goes beyond fault detection and reporting to capture information on bi-directional power flow and line loading.

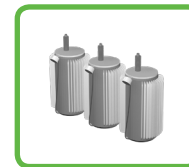

Automating Reclosers

Combining recloser automation with line sensing can enhance fault location and isolation capabilities to deliver significant O&M benefit for the utility and help maintain a positive image to the communities served.

Switching Capacitor Banks

Capacitor bank controllers can be monitored and automated.

Monitoring Regulators

Adding intelligent communications capabilities at regulators can assist with voltage management programs.

Talk to your distributor or sales representative today about designing a trial program to meet your needs. Pricing and delivery times are quoted based on package options selected.

This offer is available through March 31, 2020.
